

# Druva Professional Services - Advanced Services for Disaster Recovery

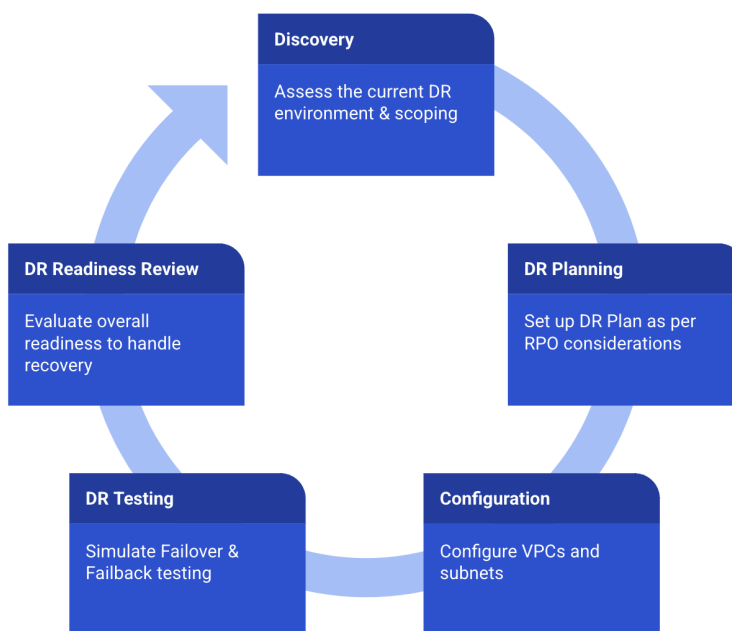

The Druva Professional Services team ensures your organization has first-hand access to our rich expertise during the design and deployment of Druva's solutions. We work directly with your IT and disaster recovery teams to enhance your organizational readiness and capabilities to respond and recover confidently from future disaster recovery events.

## The challenge

In the era of cloud, business continuity has become one of the major topics for leadership to reduce the revenue impact of any event that disrupts service. Traditional disaster recovery solutions struggle to follow data into the cloud because they were designed and optimized for client/service environments. Your business needs a solution that capitalizes on the benefits of cloud, while ensuring your business is always up and serving customers.

## How Druva Professional Services provide support

Our teams will align with you on business direction, priorities, challenges, and key initiatives/goals, before determining the steps forward to improve your disaster recovery readiness with Druva. We support customers across the following key areas:

## Discovery

The Professional Services team will begin by thoroughly understanding the customer's existing environment to identify critical workloads, dependencies and recovery objectives to define the disaster recovery scope.

## DR planning

The team will partner with the customer to develop a tailored DR strategy, review RPO/RTO considerations, failover and failback and compliance requirements.

## Configuration

We will collaborate with the customer and their partners to implement and configure DR policies and processes within the platform.

## DR testing

Druva's Professional Services consultants will simulate failover and failback testing to validate recovery workflows and ensure operational effectiveness.

## DR readiness review

Druva's Professional Services consultants will conduct a comprehensive review of DR capabilities and provide recommendations to ensure complete readiness to handle an actual event.
