

Don't Become Another Ransomware Statistic

Ransomware continues to be one of the most popular methods used by hackers.

236M
ransomware attacks occurred worldwide in the first half of 2022¹

82%
of security incidents involved a human element, whether it was through the use of stolen credentials, phishing or error²

85%
of organizations claim to have a recovery plan in place but 67% of those attacked paid the ransom³

60%
of businesses hit with ransomware also experienced unrecoverable data loss⁴

\$925K
is the average ransomware payment - a 71% increase from last year⁵

79%
increase in cyber insurance rates in the second quarter of 2022 due to the surging volume and sophistication of attacks⁶

Take Action this Cybersecurity Awareness Month

Prevent data loss

Accelerate recovery

Reduce your risk

Don't assume traditional data protection is adequate.

Get the foundational protection, visibility, and fast recovery capabilities you need to improve your security posture and be attack ready.

Visit Druva's Ransomware Recovery Page to Learn More >

Discover Druva's Data Resiliency Guarantee

The industry's only guarantee of data protection against five key risks — up to \$10M
